Installing Extensions to the EverVIEW Data Viewer

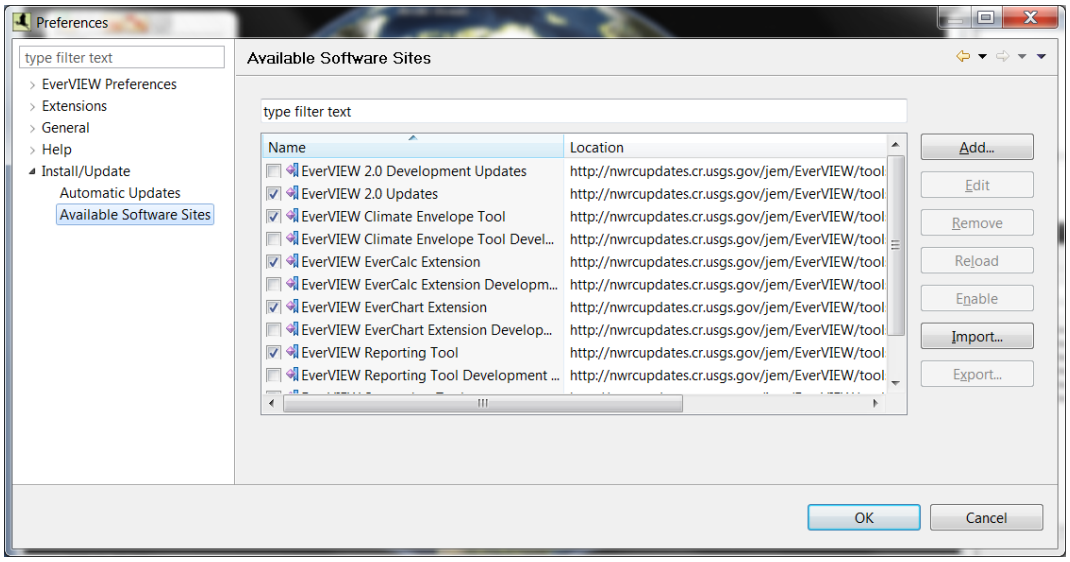
EverVIEW Data Viewer offers users the ability to install extensions for enhanced functionality. Each extension can be installed directly to EverVIEW from its respective software update site. The current list of available extensions and update sites can be found at http://www.jem.gov/Modeling/Extensions. Software update sites are also stored within EverVIEW, in the "Install/Update" section of the "Preferences" dialog.

The rest of the document explains the step by step process for installing an extension to EverVIEW. For demonstration, we will be installing the EverVIEW EverChart Utilities.

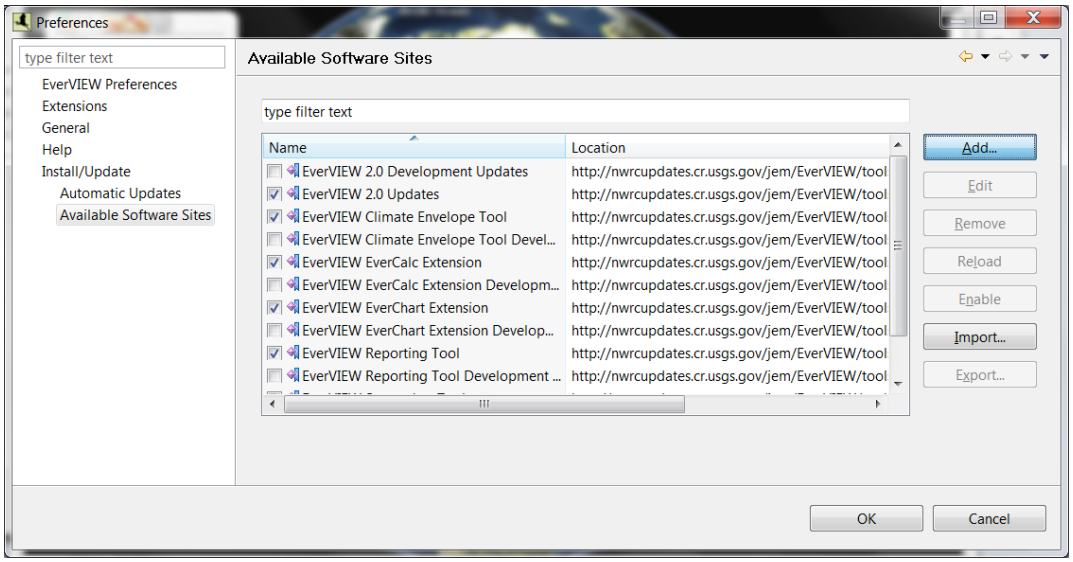
NOTE: Users may also get these extensions by downloading the latest version of the EverVIEW Data Viewer from the JEM website, at http://www.jem.gov/Modeling.

1. Before installing an extension, the software site must be enabled within EverVIEW. To view the current list of extensions and software sites, click the "Tools" menu, then select "Preferences".

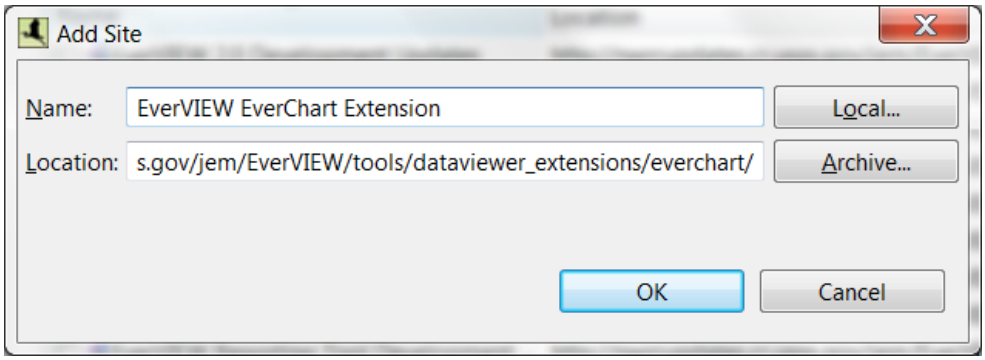
2. In the Preferences dialog, expand the “Install/Update” tab, then select “Available Software Sites”.



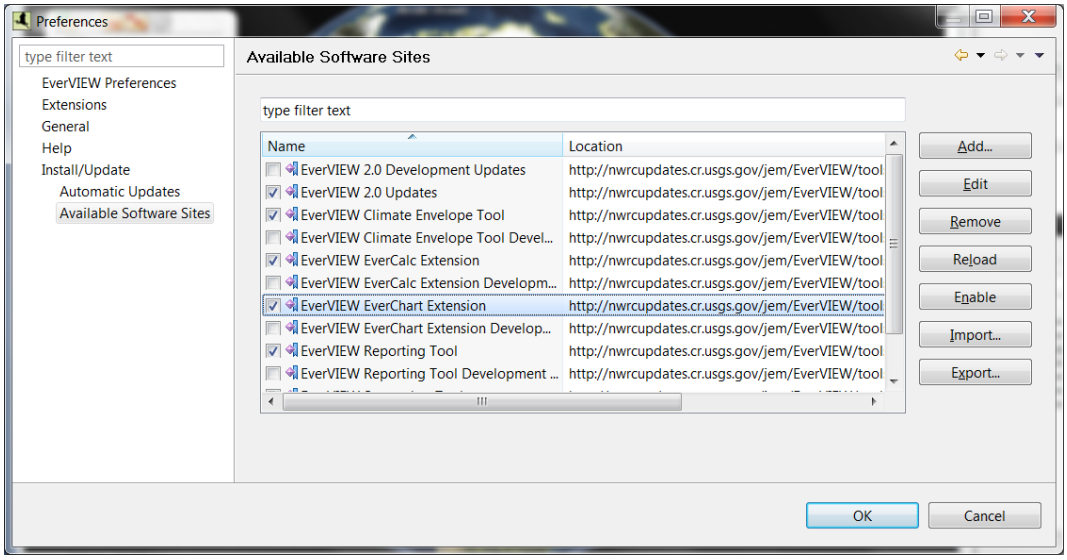
3. If the site(s) for the desired extension is not in the Available Software Sites list, click the Add button. Otherwise, skip this and the following step.



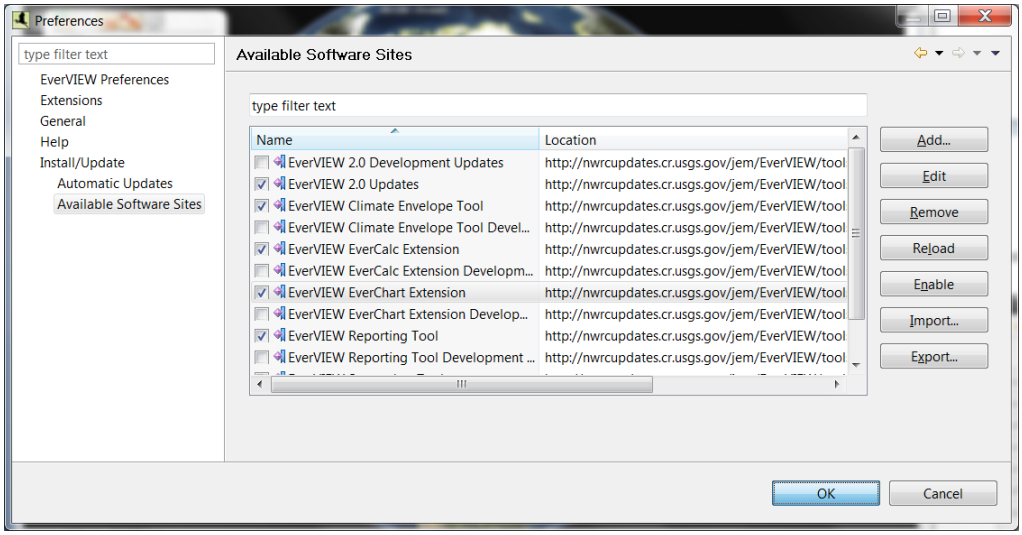
4. Enter the Name and Location of the software update site, and click “OK”.



5. Once the site for the desired extension is in the Available Software Sites list, click to select the site, and click “Enable”.

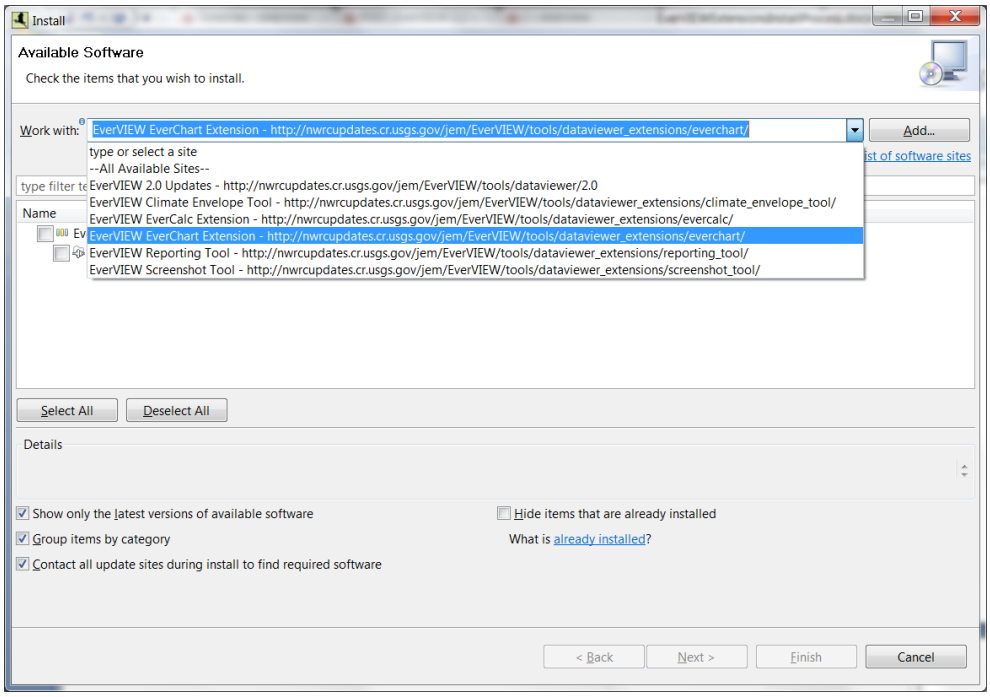


6. Confirm the changes by pressing “OK”. The Preferences dialog will now close.

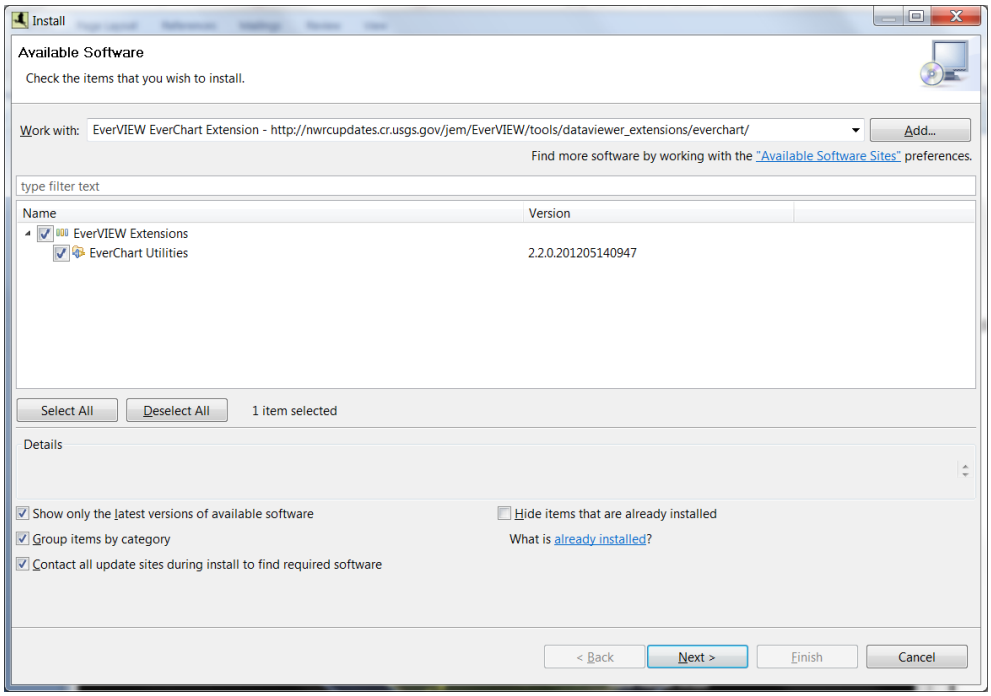


7. Now that the software site is available, the extension can be installed. Click the “Help” menu, and then select “Install New Software”.

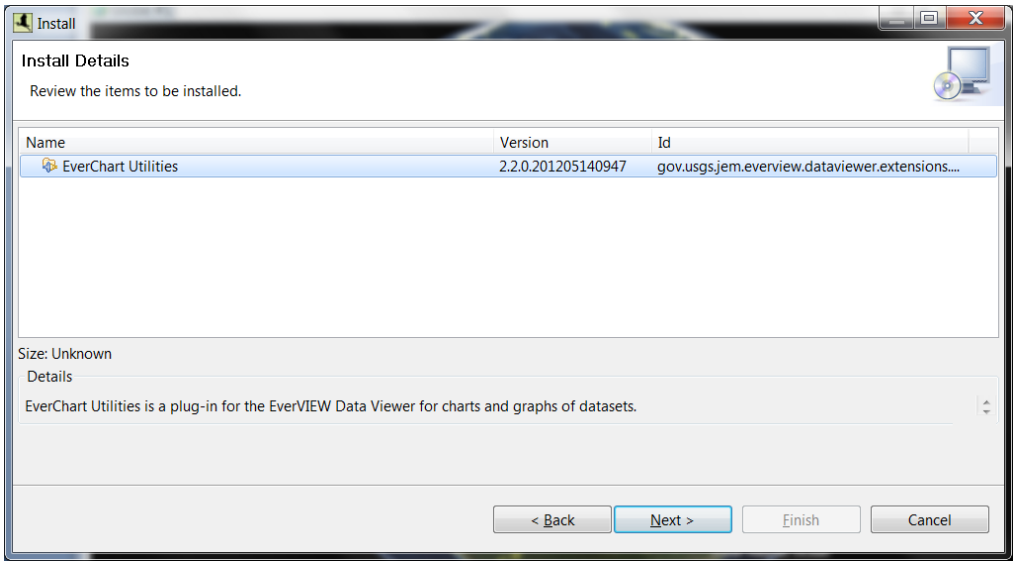
8. In the Install dialog, click the drop-down labeled “Work with:” and select the software site enabled in the previous steps (or choose "--All Available Sites--").



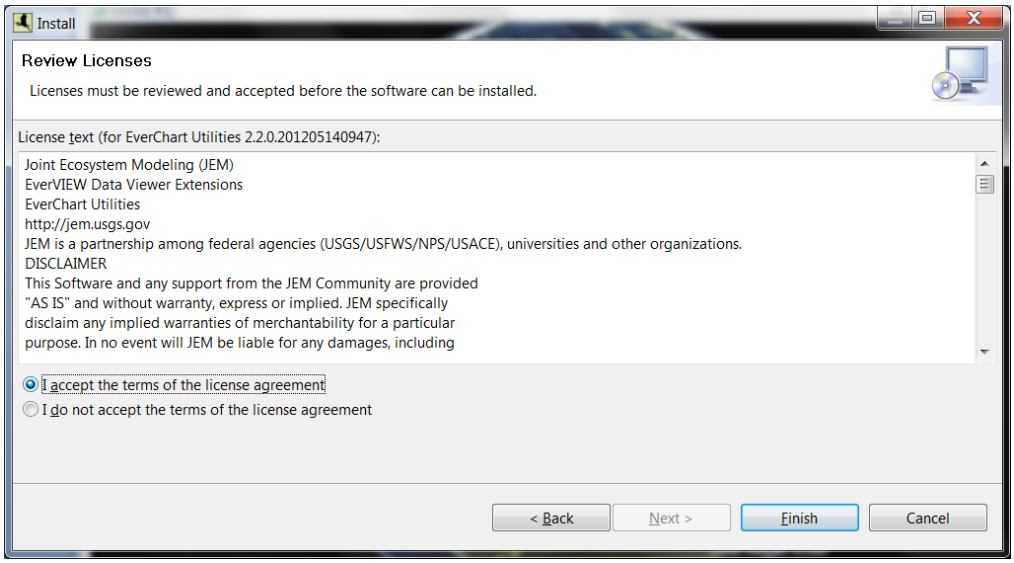
9. Select the extension to be applied. It is recommended to select all software by clicking on “Select All”.



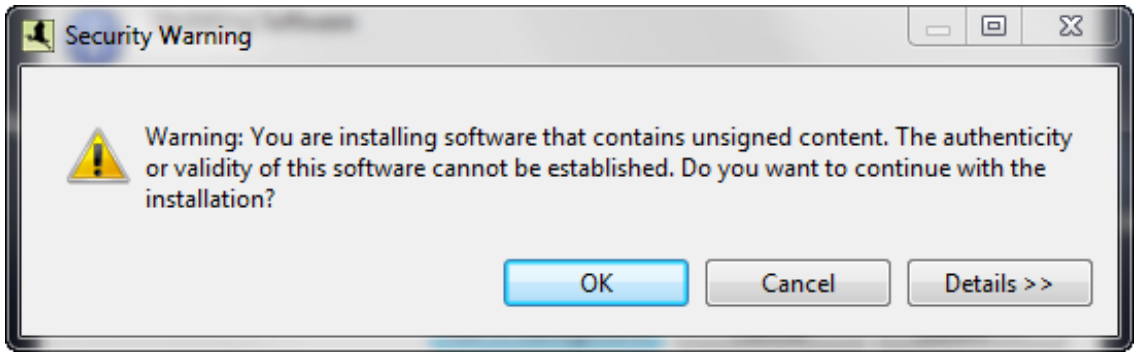
10. Confirm the installation by clicking on “Next”.



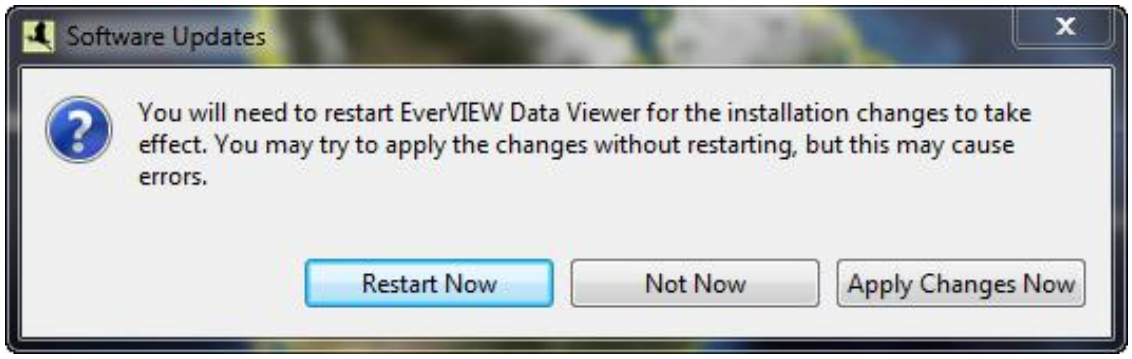
11. Accept the license and click “Finish”.

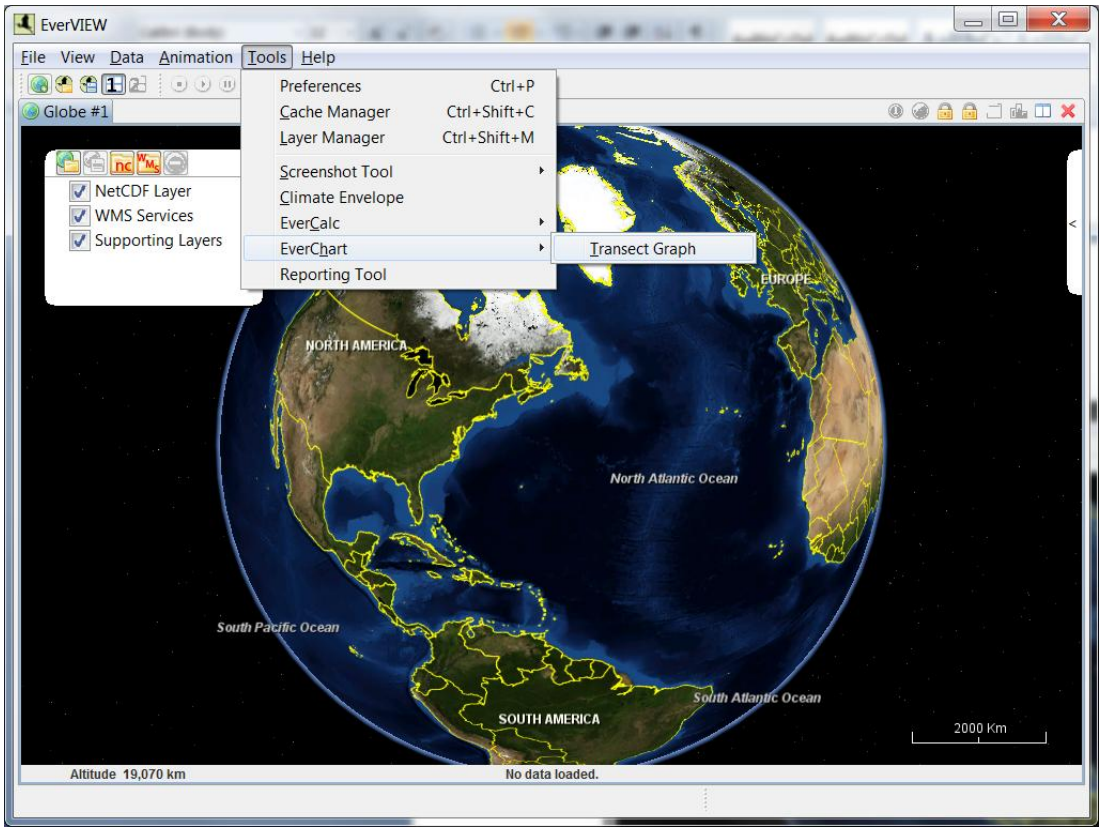


12. The update process might give a security warning about “unsigned content”. Click “Ok” to continue.



13. Upon applying the updates, the application may require a restart. It is recommended to restart the application for updates to be applied.





14. When EverVIEW has finished restarting, the extension can be accessed through the "Tools" menu.
